Background	RAS protein activator like 2(RASAL2) Homo sapiens This gene encodes a protein that contains the GAP-related domain (GRD), a characteristic domain of GTPase-activating proteins (GAPs). GAPs function as activators of Ras superfamily of small GTPases. The protein encoded by this gene is able to complement the defective RasGAP function in a yeast system. Two alternatively spliced transcript variants of this gene encoding distinct isoforms have been reported. [provided by RefSeq, Jul 2008],
Other	RASAL2 NGAP, Ras GTPase-activating protein nGAP (RAS protein activator-like 2)
