<b>Background</b>	PDZ and LIM domain 5(PDLIM5) Homo sapiens This gene encodes a member of a family of proteins that possess a 100-amino acid PDZ domain at the N terminus and one to three LIM domains at the C-terminus. This family member functions as a scaffold protein that tethers protein kinases to the Z-disk in striated muscles. It is thought to function in cardiomyocyte expansion and in restraining postsynaptic growth of excitatory synapses. Alternative splicing of this gene results in multiple transcript variants. <b>Other</b>	PDLIM5, PDZ and LIM domain protein 5
