<b>Background</b>	PR/SET domain 10(PRDM10) Homo sapiens The protein encoded by this gene is a transcription factor that contains C2H2-type zinc-fingers. It also contains a positive regulatory domain, which has been found in several other zinc-finger transcription factors including those involved in B cell differentiation and tumor suppression. Studies of the mouse counterpart suggest that this protein may be involved in the development of the central nerve system (CNS), as well as in the pathogenesis of neuronal storage disease. Multiple alternatively spliced transcript variants encoding distinct isoforms have been observed. [provided by RefSeq, Jul 2008],
<b>Other</b>	PRDM10 KIAA1231 PFM7 TRIS, PR domain zinc finger protein 10 (PR domain-containing protein 10) (Tristanin)
