| <b>Background</b>            | retinoic acid receptor responder 2(RARRES2) Homo sapiens This gene encodes a secreted chemotactic protein that initiates chemotaxis via the ChemR23 G protein-coupled seven-transmembrane domain ligand. Expression of this gene is upregulated by the synthetic retinoid tazarotene and occurs in a wide variety of tissues. The active protein has several roles, including that as an adipokine and as an antimicrobial protein with activity against bacteria and fungi. [provided by RefSeq, Nov 2014], |
| <b>Other</b>                 | RARRES2 TIG2, Retinoic acid receptor responder protein 2 (RAR-responsive protein TIG2) (Tazarotene-induced gene 2 protein)   |
