<b>Background</b>	SLIT and NTRK like family member 4(SLITRK4) Homo sapiens This gene encodes a transmembrane protein belonging to the the SLITRK family. These family members include two N-terminal leucine-rich repeat domains similar to those found in the axonal growth-controlling protein SLIT, as well as C-terminal regions similar to neurotrophin receptors. Studies of an homologous protein in mouse suggest that this family member functions to suppress neurite outgrowth. Alternative splicing results in multiple transcript variants. [provided by RefSeq, May 2010],
<b>Other</b>	SLITRK4, SLIT and NTRK-like protein 4
