Background	single stranded DNA binding protein 2(SSBP2) Homo sapiens This gene encodes a subunit of a protein complex that interacts with single-stranded DNA and is involved in the DNA damage response and maintenance of genome stability. The encoded protein may also play a role in telomere repair. A variant of this gene may be associated with survival in human glioblastoma patients. [provided by RefSeq, Sep 2016],
Other	SSBP2, Single-stranded DNA-binding protein 2
