Background	SPARC/osteonectin, cwcv and kazal like domains proteoglycan 2(SPOCK2) Homo sapiens This gene encodes a protein which binds with glycosaminoglycans to form part of the extracellular matrix. The protein contains thyroglobulin type-1, follistatin-like, and calcium-binding domains, and has glycosaminoglycan attachment sites in the acidic C-terminal region. Three alternatively spliced transcript variants that encode different protein isoforms have been described for this gene. [provided by RefSeq, Oct 2011],
Other	SPOCK2 KIAA0275 TICN2 UNQ269/PRO306, Testican-2 (SPARC/osteonectin, CWCV, and Kazal-like domains proteoglycan 2)
