Background	BCL tumor suppressor 7C(BCL7C) Homo sapiens This gene is identified by the similarity of its product to the N-terminal region of BCL7A protein. The BCL7A protein is encoded by the gene known to be directly involved in a three-way gene translocation in a Burkitt lymphoma cell line. The function of this gene has not yet been determined. Two transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Nov 2013],
Other	BCL7C, B-cell CLL/lymphoma 7 protein family member C
