Background	calcyclin binding protein(CACYBP) Homo sapiens The protein encoded by this gene is a calcyclin binding protein. It may be involved in calcium-dependent ubiquitination and subsequent proteosomal degradation of target proteins. It probably serves as a molecular bridge in ubiquitin E3 complexes and participates in the ubiquitin-mediated degradation of beta-catenin. Two alternatively spliced transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jul 2008],
Other	CACYBP, Calcyclin-binding protein; hCacyBP; S100A6-binding protein; Siah-interacting protein
