Background	calmodulin 1(CALM1) Homo sapiens This gene encodes a member of the EF-hand calcium-binding protein family. It is one of three genes which encode an identical calcium binding protein which is one of the four subunits of phosphorylase kinase. Two pseudogenes have been identified on chromosome 7 and X. Multiple transcript variants encoding different isoforms have been found for this gene.[provided by RefSeq, Oct 2009],
Other	CALM1, Calmodulin; CAM3; CAMC; CAMIII; Calmodulin; CaM
