Background	centrosomal protein 63(CEP63) Homo sapiens This gene encodes a protein with six coiled-coil domains. The protein is localized to the centrosome, a non-membraneous organelle that functions as the major microtubule-organizing center in animal cells. Several alternatively spliced transcript variants have been found, but their biological validity has not been determined. [provided by RefSeq, Jul 2008],
Other	CEP63, Centrosomal protein of 63 kDa (Cep63)
