<b>Background</b>	CASP8 and FADD like apoptosis regulator(CFLAR) Homo sapiens The protein encoded by this gene is a regulator of apoptosis and is structurally similar to caspase-8. However, the encoded protein lacks caspase activity and appears to be itself cleaved into two peptides by caspase-8. Several transcript variants encoding different isoforms have been found for this gene, and partial evidence for several more variants exists. [provided by RefSeq, Feb 2011],
<b>Other</b>	CFLAR, CASP8 and FADD-like apoptosis regulator
