Conjugation			
Background	SAP domain containing ribonucleoprotein(SARNP) Homo sapiens This gene encodes a protein that is upregulated in response to various cytokines. The encoded protein may play a role in cell cycle progression. A translocation between this gene and the myeloid/lymphoid leukemia gene, resulting in expression of a chimeric protein, has been associated with acute myelomonocytic leukemia. Pseudogenes exist on chromosomes 7 and 8. Alternatively spliced transcript variants have been described. [provided by RefSeq, Feb 2009],		
Other	SARNP, SAP domain-containing ribonucleoprotein
