<b>Background</b>	cysteine and glycine rich protein 1(CSRP1) Homo sapiens This gene encodes a member of the cysteine-rich protein (CSRP) family. This gene family includes a group of LIM domain proteins, which may be involved in regulatory processes important for development and cellular differentiation. The LIM/double zinc-finger motif found in this gene product occurs in proteins with critical functions in gene regulation, cell growth, and somatic differentiation. Alternatively spliced transcript variants have been described. [provided by RefSeq, Aug 2010],
<b>Other</b>	CSRP1, Cysteine and glycine-rich protein 1
