Background	E2F transcription factor 8(E2F8) Homo sapiens This gene encodes a member of a family of transcription factors which regulate the expression of genes required for progression through the cell cycle. The encoded protein regulates progression from G1 to S phase by ensuring the nucleus divides at the proper time. Multiple alternatively spliced variants, encoding the same protein, have been identified. [provided by RefSeq, Jan 2012],
Other	E2F8, Transcription factor E2F8 (E2F-8)
