Background	tubulin epsilon 1(TUBE1) Homo sapiens This gene encodes a member of the tubulin superfamily. This protein localizes to the centriolar sub-distal appendages that are associated with the older of the two centrioles after centrosome duplication. This protein plays a central role in organization of the microtubules during centriole duplication. A pseudogene of this gene is found on chromosome 5.[provided by RefSeq, Jan 2009],
Other	TUBE1 TUBE, Epsilon Tubulin
