<b>Background</b>	guanylate binding protein 3(GBP3) Homo sapiens This gene encodes a member of the guanylate-binding protein (GBP) family. GBPs specifically bind guanine nucleotides (GMP, GDP, and GTP) and contain two of the three consensus motifs found in typical GTP-binding proteins. The encoded protein interacts with a member of the germinal center kinase family. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jan 2016],
<b>Other</b>	GBP3, Guanylate-binding protein 3
