Conjugation	
Background	guanylate cyclase 1 soluble subunit beta(GUCY1B3) Homo sapiens This gene encodes the beta subunit of the soluble guanylate cyclase (sGC), which catalyzes the conversion of GTP (guanosine triphosphate) to cGMP (cyclic guanosine monophosphate). The encoded protein contains an HNOX domain, which serves as a receptor for ligands such as nitric oxide, oxygen and nitrovasodilator drugs. Alternative splicing results in multiple transcript variants. [provided by RefSeq, May 2014],
Other	GUCY1B3, Guanylate cyclase soluble subunit beta-1
