Background	glomulin, FKBP associated protein(GLMN) Homo sapiens This gene encodes a phosphorylated protein that is a member of a Skp1-Cullin-F-box-like complex. The protein is essential for normal development of the vasculature and mutations in this gene have been associated with glomuvenous malformations, also called glomangiomas. Multiple splice variants encoding different isoforms have been found for this gene. [provided by RefSeq, Feb 2016],
Other	GLMN FAP48 FAP68 VMGLOM, Glomulin (FK506-binding protein-associated protein) (FAP) (FKBP-associated protein)
