Background	solute carrier family 2 member 1 (SLC2A1) Homo sapiens This gene encodes a major glucose transporter in the mammalian blood-brain barrier. The encoded protein is found primarily in the cell membrane and on the cell surface, where it can also function as a receptor for human T-cell leukemia virus (HTLV) I and II. Mutations in this gene have been found in a family with paroxysmal exertion-induced dyskinesia. [provided by RefSeq, Apr 2013],
Other	SLC2A1, Solute carrier family 2 facilitated glucose transporter member 1
