Background	G protein-coupled receptor 162(GPR162) Homo sapiens This gene was identified upon genomic analysis of a gene-dense region at human chromosome 12p13. It appears to be mainly expressed in the brain; however, its function is not known. Alternatively spliced transcript variants encoding different isoforms have been identified. [provided by RefSeq, Jul 2008],
Other	GPR162 GRCA, Probable G-protein coupled receptor 162 (Gene-rich cluster gene A protein)
