<b>Background</b>	glycoprotein M6B(GPM6B) Homo sapiens This gene encodes a membrane glycoprotein that belongs to the proteolipid protein family. Proteolipid protein family members are expressed in most brain regions and are thought to be involved in cellular housekeeping functions such as membrane trafficking and cell-to-cell communication. This protein may also be involved in osteoblast differentiation. Alternate splicing results in multiple transcript variants. Pseudogenes of this gene are located on chromosomes Y and 22. <b>Other</b>	GPM6B M6B, Neuronal membrane glycoprotein M6-b (M6b)
