Conjugation	
Background	hepatocyte growth factor-regulated tyrosine kinase substrate(HGS) Homo sapiens The protein encoded by this gene regulates endosomal sorting and plays a critical role in the recycling and degradation of membrane receptors. The encoded protein sorts monoubiquitinated membrane proteins into the multivesicular body, targeting these proteins for lysosome-dependent degradation. [provided by RefSeq, Dec 2010],
Other	HGS, Hepatocyte growth factor-regulated tyrosine kinase substrate
