Background	interleukin 2 receptor subunit gamma(IL2RG) Homo sapiens The protein encoded by this gene is an important signaling component of many interleukin receptors, including those of interleukin -2, -4, -7 and -21, and is thus referred to as the common gamma chain. Mutations in this gene cause X-linked severe combined immunodeficiency (XSCID), as well as X-linked combined immunodeficiency (XCID), a less severe immunodeficiency disorder. Other	IL2RG, Cytokine receptor common subunit gamma
