<b>Background</b>	mitogen-activated protein kinase kinase kinase 1(MAP3K1) Homo sapiens The protein encoded by this gene is a serine/threonine kinase and is part of some signal transduction cascades, including the ERK and JNK kinase pathways as well as the NF-kappa-B pathway. The encoded protein is activated by autophosphorylation and requires magnesium as a cofactor in phosphorylating other proteins. This protein has E3 ligase activity conferred by a plant homeodomain (PHD) in its N-terminus and phospho-kinase activity conferred by a kinase domain in its C-terminus. <b>Other</b>	MAP3K1, Mitogen-activated protein kinase kinase kinase 1
